Correction: Prenatal exposure to the Dutch famine is associated with more self-perceived cognitive problems at 72 years of age

Aline Marileen Wiegiersma^{1*}, Amber Boots¹, Tessa J. Roseboom^{1,2} and Susanne R. de Rooij¹

Correction to: BMC Geriatrics 22, 176 (2022)
<https://doi.org/10.1186/s12877-022-02820-2>

Published online: 10 May 2022

After publication of this article [1], the authors reported some minor errors in Tables 1 and 2.

- In Table 1, there is a superfluous c behind “N Vascular problems”; this can be removed twice.
- In Table 1, “Exposure to famine” is aligned incorrectly; should be moved to the right, above “In late gestation; In mid gestation; In early gestation” (as in Table 2).
- In Table 2, a note is missing: “d Model 4: Sex-specific logistic regression model, adjusted for birth weight, education and SES”

The original article [1] has been updated.
